

# OVALSTRAPPING INC.

## SCRAP WIRE COILER

MODEL 205X

### A BETTER WAY TO DISPOSE OF SCRAP WIRE

- Smooth, easy, safe operation.
- Low maintenance.
- Easy handling.
- Increased scrap value.

#### EASIER OPERATION

Ends of wires are placed manually into the slotted, coiling shaft mandrel. Several can be placed on at a time and then processed to form the coil. Operation of the cycle-start button automatically secures the wires, forms the coil, ejects and resets for the next cycle.

The timer can be adjusted to accommodate different lengths of wire.

#### MINIMUM MAINTENANCE

Unlike machines that chop scrap wire, the coiler does not have to withstand constant shock-loading and cutting-blade wear which require frequent adjustments to function properly.
